

PRE FILTER KIT

Pre-filtration is ideal where sediment is an issue, or if you want to ensure your Everpure cartridge last longer.

Pentair housings are known for their high quality reliability. They represent the industry-standard plastic filter housings of today and are the foundation for the filtration products that Pentair offers.

Install the 10" pre-filter before your Everpure filter, whether you're using the filter for drinking water, coffee or ice machines, the pre filter will remove most of the sediment coming in to the Everpure cartridge.

The kit comes complete with:

- 10" Clear housing with 1/2" inlet
- 10" 1 micron pre-filter cartridge
- Mounting bracket with screws
- 2 x 1/2" to 3/8" Male Fittings
- 1m 3/8" tubing to connect from incoming line

Clear housing lets you visually inspect trapped particles and makes determining when to change the cartridge easy

Durable slim bowl design makes cartridge change outs easy to handle

*Please note that you have to install an Everpure filter after the pre-filter, and not before

Specifications:

- Overall Dimensions: 9.75" L x 2.5" D (24.7 cm x 6.3 cm)
- Micron rating: 1 micron
- Temperature rating: 30 degrees C
- Maximum Flow Rate 30L/min
- Maximum Pressure 8bar

WATER YOU CAN TRUST
